If vision is acceptable, perform a slit lamp examination to confirm adequate fit.

Monovision contact lens wear may not be optimal for such activities as:
- Driving (motor vehicle and bicycle)
- Operating heavy machinery
- Playing sports
- Other potentially hazardous activities; and

Monovision fitting success can be improved by the following suggestions:
- Make use of proper illumination when carrying out visual tasks.
- Have a third contact lens (distance power) to use when critical distance viewing is needed.
- Teach the patient how to apply and remove his or her lenses.
- Ensure that the patient clearly understands the prescribed wearing and care instructions.
- Review these instructions with the patient so that he or she clearly understands these instructions.

When disposed of after a single daily use, these lenses may reduce the risk of:
- Bacterial conjunctivitis
- Viral keratitis
- Fungal keratitis

When worn as a daily disposable lens, the lenses may provide improved comfort for:
- Patients who experience mild dryness and itching associated with allergies during daily contact lens wear.

REPLACEMENT SCHEDULE

1. One week from the initial lens dispensing to patient
2. One week from the last lens dispensed to patient

This Package Insert and Fitting Guide is intended for the Eye Care Professional, but should be made available to patients upon request.

The Eye Care Professional should provide the patient with the appropriate instructions that pertain to the patient’s prescribed lenses.

REPORTING OF ADVERSE REACTIONS

All serious adverse experiences and adverse reactions observed in patients wearing these lenses or experienced with these lenses should be reported to:

Johnson & Johnson Vision Care, Inc.
7501 Carver Road
Jacksonville, FL 32256

CAUTION: U.S. Federal law restricts this device to sale by or on the order of a licensed practitioner.

This Package Insert and Fitting Guide is intended for the Eye Care Professional, but should be made available to patients upon request.
**The 1-DAY ACUVUE® DEFINE™ Contact Lenses**

The 1-DAY ACUVUE® DEFINE™ Contact Lenses are available as spherical lenses. The lens material is 1.5 tetramethylsiloxane trimethacrylate and ethylene glycol dimethacrylate.

**Lens Properties**

- **Surface Character**: Hydrophilic
- **Refractive Index**: 1.40
- **UV BLOCKING**: 0.00 to +1.00D (in 0.50D increments)
- **Base Curve**: Low minus lens—varies with power (e.g., -3.00D, 0.084 mm)
- **UVA range of 316 nm to 380 nm.
- **TRANSMITTANCE CURVES**
  - The 1-DAY ACUVUE® DEFINE™ Brand Contact Lenses with LACREON® Technology vs. natural human corneal and vitreous humor crystalline lenses.

### GENERAL FITTING GUIDELINES

1. **Patient Selection**
   - Patients selected to wear 1-DAY ACUVUE® DEFINE™ Contact Lenses should be instructed to conduct a simple 3-part self-examination at baseline ocular status.

2. **Motivation to wear lenses**
   - **Instructions for Use**
     - **WARNINGS**
       - **Severe insufficiency of lacrimal secretion (dry eye)**
       - **Any eye disease, injury or abnormality that affects the cornea, conjunctiva or eyelids**
       - **Acute or subacute inflammation or infection of the anterior chamber of the eye**

3. **Preceding the initial selection of trial contact lenses, a comprehensive ocular evaluation should be performed that includes, but is not limited to, the measurement of factors (extent and nature of outdoor activities). UV-blocking contact lenses are also indicated for daily disposable wear. Patients should always dispose of lenses when removed and have instructions in the "Patient Instruction Guide" for the 1-DAY ACUVUE® DEFINE™ Contact Lenses against the patient's need for refractive correction; therefore, the continuing ocular health of the eye must be regularly monitored and the patient should be instructed to continue wearing contact lenses unless specifically instructed to discontinue use.

4. **A. Patient Selection**
   - **GENERAL FITTING GUIDELINES**
     - **WARNINGS**
       - **Severe insufficiency of lacrimal secretion (dry eye)**
       - **Any eye disease, injury or abnormality that affects the cornea, conjunctiva or eyelids**
       - **Acute or subacute inflammation or infection of the anterior chamber of the eye**

5. **Preceding the initial selection of trial contact lenses, a comprehensive ocular evaluation should be performed that includes, but is not limited to, the measurement of factors (extent and nature of outdoor activities). UV-blocking contact lenses are also indicated for daily disposable wear. Patients should always dispose of lenses when removed and have instructions in the "Patient Instruction Guide" for the 1-DAY ACUVUE® DEFINE™ Contact Lenses against the patient's need for refractive correction; therefore, the continuing ocular health of the eye must be regularly monitored and the patient should be instructed to continue wearing contact lenses unless specifically instructed to discontinue use.

6. **B. Pre-Fitting Examination**
   - **Initial evaluation of the patient should begin with a thorough history to determine if there are any contraindications to contact lens wear. During the eye history examination, the patient's visual history, personal and family history, medical history, and present ocular symptoms should be obtained. The patient should be included to manifest visual symptoms, in particular, visual disturbance or monocular visual symptoms, in particular, visual disturbance or monocular vision. The patient should be instructed to pay attention to the following symptoms:  
     - **WARNINGS**
       - **Severe insufficiency of lacrimal secretion (dry eye)**
       - **Any eye disease, injury or abnormality that affects the cornea, conjunctiva or eyelids**
       - **Acute or subacute inflammation or infection of the anterior chamber of the eye**

7. **C. Initial Power Determination**
   - **A spectacle refraction should be performed to establish the patient's baseline refractive status and to determine the appropriate parameters. It is recommended to compensate for variation in distance (the refraction is greater than +4.00 D)

8. **D. GENERAL FITTING GUIDELINES**
   - **A. Patient Selection**
     - **WARNINGS**
       - **Severe insufficiency of lacrimal secretion (dry eye)**
       - **Any eye disease, injury or abnormality that affects the cornea, conjunctiva or eyelids**
       - **Acute or subacute inflammation or infection of the anterior chamber of the eye**

9. **E. Final Lens Power**
   - **A spherical refraction should be performed to determine the final lens power after the patient has been fitted. The spherical refraction should be combined with the final lens power to determine the final lens prescription. The patient should be instructed to wear their new contact lenses in addition to the current contact lens power unless their current contact lens prescription is effective or as a result of presbyopia.
